

## Blue Wave Sets a New Standard

### BLUE WAVE BOATS BY PARKS

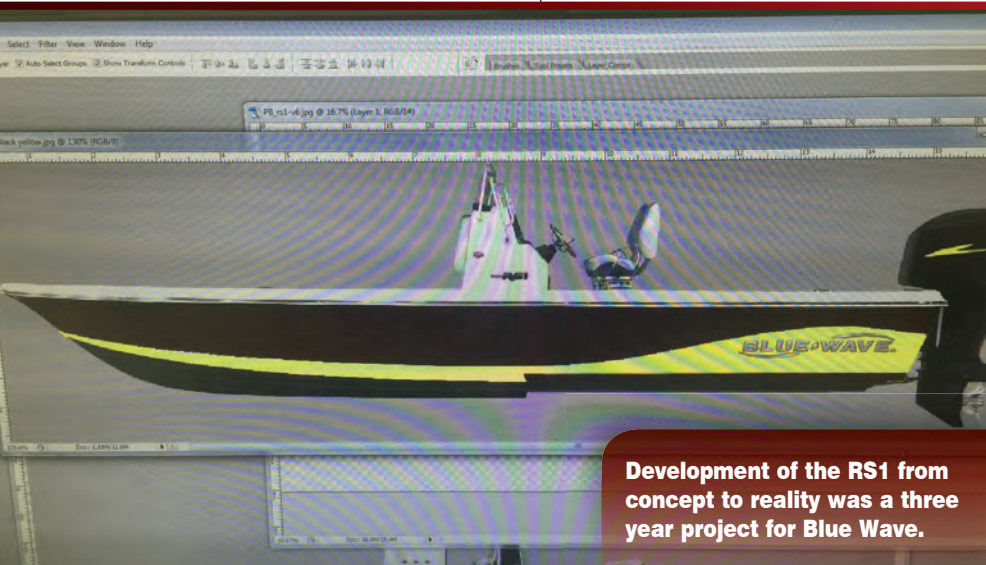

Manufacturing located in Seminole, Oklahoma has an exciting new model that is

have offered us a sneak peak of what they have been up too.

The Pure Bay - RS1 has taken standard equipment and cutting edge hull designs to a whole new level. This project was an accumulation of 3 years of research, development, engineering, design and test-

step reduces the hull's surface contact with the water which improves efficiency over the entire speed range. This reduction in friction gives the RS1 a leading edge in fuel efficiency and performance.

Kevlar has also been used within the manufacturing process to add further

Development of the RS1 from concept to reality was a three year project for Blue Wave.

Rigorous testing played a critical in the three-year development of the RS1

sure to be another innovative and class leading design amongst the ever increasing center console bay boat segment and they

ing. The RS1 hull is designed to introduce aerated water under the running surface. This cushion of air that occurs behind the

unparalleled strength by using state of the art materials.

The acrylic dash comes standard with

a Garmin 7610XSV and Wet Sounds Blue Tooth Stealth 6 Speaker Sound Bar flush mounted by the manufacturer. These components along with the Navigation lights, 3 stage Livewell System, Bilge Pumps and accessory lighting are all driven by C-Zone's fully integrated digital network interface and allows touch screen control for the boats switching and display of engine information.

The innovative new option for the Clear Vision fore live well gives the ability to monitor bait or the condition of your catch in the live well from the front deck (and, quite frankly, just looks incredible). Stainless Steel Friction hinges are used through-

lockers with integrated rod racks, anchor box and enormous storage areas that are not only insulated but also feature 1 1/2" drains that are plumbed directly overboard.

The front deck step doubles as an over engineered fish box, correctly named PermaCooler. The PermaCooler can be used as storage, cooler or fish box and has the high density insulation, design and structural integrity that rivals the high end cooler brands.

The rear deck features jump seats with arm rest and are both appointed by personal storage areas on each side with double LED back lit USB ports, cup holders and custom billet aluminum grab

multiple mobile devices at the same time while also keeping their personal effects out of harm's way. Two additional rear storage boxes keep gear and safety equipment easily accessible and clutter free. The drain through soft mats at the bottom of each storage box and anchor box give your items a great cushion to keep them in place and not banging around. The aft live well has what is considered the perfect size opening, pro air, recirculating pump and a 3" drain. The bilge area has a dedicated lid for easy pump inspection and access.

Overall length is twenty two feet eight inches with a beam of eight foot six inches. The Pure Bay - RS1 has many

out which alleviated the need for cables or shocks to keep each lid open.

The front fishing platform has 2 rod

handles that fit flush with the walk around gunnel. These personal storage areas allow your guests to have their own area to charge

never before seen features and is rated for 300HP.
